Turas

The complete survey analytics system

THE PROBLEM

Research that stops working the day it's delivered

1 Good Data, Limited Life

You commission research and get a deck that answers the questions you asked at the time.

2 New Questions, Old Process

When a new question surfaces, someone has to reopen the dataset, rebuild the analysis. That takes time and money.

3 A Deliverable, Not a Resource

Most research ends up as a presentation filed on a shared drive. The data stops working for you.

Turas changes that. Let me show you.

BEFORE WE LOOK

What’s behind it

Built on R

Open-source statistical environment used by national statistics offices, central banks, and universities. Every calculation is inspectable. There are no black boxes hiding the calculation mechanics from view.

Fully Managed, Fully Secure

You send us the data. We handle all preparation, analysis and delivery on our own systems. No third-party platform touches your data. The delivered report is immutable.

SAMRA Members

Duncan Brett is a SAMRA Accredited Researcher with 30+ years quantitative research experience and we're here for you from data preparation through to interpretation.

No Subscriptions

Pay per project. No software to learn, no licences, no installations. Send us a dataset and we deliver an interactive report.

SEE IT IN ACTION

How it works

WE DO

1 → 2 →

Receive
Your data

Create
Your report

YOU DO

3 → 4 → 5

Explore
Tables & charts

Pin
Key findings

Present
Your story

You send the data. We build the report. You explore the story.

THE SYSTEM

What Turas can analyse

We select and configure the right modules for your project and deliver them in a single interactive report

CORE

Tabs

Automated crosstabs with significance testing

Tracker

Multi-wave trend analysis across tracking waves

Weighting

Target population representation

Confidence

Rigorous validity testing with plain-language callouts

ADVANCED

Key Driver

Strongest factors driving business outcomes

Categorical Key Driver

Ordinal logistic regression for categorical outcomes

Segmentation

Statistical clustering for customer groups

CHOICE & PRICING

Conjoint

Choice modelling with interactive market simulator

MaxDiff

Precise preference rankings with interactive simulator

Pricing

Van Westendorp, Gabor-Granger & monadic price models

NEXT STEPS

What would be most useful?

1 See Your Own Data

Send us an existing dataset — even an old one — and we'll run it through Turas so you can see your data in an interactive report.

*subject to data in a usable format

2 Scope a Current Project

If you have a study in the pipeline, we can discuss how Turas fits the analytical plan and what the output would look like.

3 Share With Your Team

We can set up a broader session for colleagues who need to see it.
